

## Backend Python Developer – Job Description

**BEE** (<https://beefree.io>), our MailUp Group Business Unit who aims to be the best drag-&-drop email builder for designing mobile-responsive emails, is looking for a **Backend Python Developer**.

### Your impact:

As a Backend Developer, reporting directly to the **Senior Development Manager**, you will be part of the Development Team dedicated to the "BEE" project (<https://beefree.io>) and will be focused on the development and maintenance of the BEE editor and related products. Your core accountabilities will be:

- work on the maintenance and expansion of all the services connected to the BEE editor;
- participate in the analysis and development of appropriate solutions to respond to customer needs on a specific roadmap;
- be focused on making the implemented solutions modular, reusable and scalable, frequently comparing them with the team that is responsible for the development of BEE "core" modules;
- work with different programming languages and with different technology stacks;
- collaborate with other Group teams supporting them in QA activities, second level support tickets, technical documentation, creation of sample code, etc.

### What we are looking for:

- 2+ years of experience in Python;
- Excellent REST API knowledge;
- Excellent bases in server side and Object Oriented programming;
- Good knowledge of Django and Django Rest Framework;
- Good knowledge Database like: MySql and/or PostgreSQL;
- Good knowledge of T-SQL languages;
- Good experience with git versioning system (Git);
- An autonomous, responsible and gifted person with initiative will be a lot important in order to reach the go;
- Excellent ability to relate and communicate with the rest of the team;
- Proficiency in English: English is the official language of the BEE business unit in MailUp Group. Most of your writing (tickets, docs, feedback, etc.) will be in English. Your written English level must be outstanding. Spoken English should also be at a good level, although less critical.

### Preferred Qualifications:

- Knowledge of javascript modules;
- Good knowledge of Windows Server and Linux;
- Good knowledge of the tools used to build frontend projects (Webpack, Browserify, Babel ...);
- Good knowledge of AWS services, including Lambda, API Gateway, Cloud Formation, S3 ...;
- Experience in writing unit tests and end-to-end tests;
- Experience in drafting technical documentation;
- Knowledge of: Redux and Redux Thunk, CSS, Angularjs, SPA application.

### What it's like working at BEE:

- A fast growing, exciting project with worldwide recognition;
- A dynamic team, geographically dispersed (Italy, USA), working with a startup mindset;
- Yearly team retreat;
- Opportunities for professional development.

### Location:

- Cremona, Genova or Milano, Italy;
- Smart working available;
- Presence in our Cremona office required at least once a week.

BEE stands for "Best Email Editor" and that's the ambitious goal chosen for this project. Made with lots of passion between San Francisco and Italy, there are over 5,000 paying customers of our products, as of November of 2018, and the number is growing rapidly due to the success of the project.
